# 碳水化合物早餐 Carbs-based Breakfast

在早上，进食高简单碳水化合物的早餐（如谷类、面包、三明治、蛋饼、粥面等）。令血糖急速升高，身体因而分泌额外的胰岛素。胰岛素把血中糖分移到细胞并转为脂肪。结果血糖在短时间降低，增加了身体对糖分渴求。如此每天循环两至三次，这是糖尿病、血压高及超重的主要成因。

In the morning, **simple carbohydrates** (sugary refined cereals, white bread, toast etc) cause an immediate surge in blood sugar, which results in a substantial **release of insulin** from our pancreas.

The insulin removes most of the sugar from our blood, turning any excess into fat. The result is a decreased level of blood sugar, and thirst for more carbohydrates. This cycle repeats itself 2-3 more times during the day. This vicious cycle constitutes one of the major reasons for **diabetes, high blood pressure** and **extra weight**.
